

TEMPORARY / PERMANENT SHORING OF EXCAVATIONS OR EXISTING WALLS

Excavating by nature can be unsafe. Reinforcement of unprotected excavations help ensure that unstable soil / slopes remain stable and supported, preventing cave-ins and other dangerous circumstances. Platipus can provide a range of innovative anchoring solutions to reinforce excavations during construction projects and are widely accepted by Local, State and Federal Highway Agencies.

WHY USE PLATIPUS ANCHORS:

- Full technical assistance including conceptual proposals
- Continuous threaded rod or cable anchor system configurations
- Easy installation using conventional equipment (mini-excavator / breaker)
- On-site training and support through all stages of the installation process
- Anchors are post-tensioned to the engineers determined load (immediately serviceable)

APPLICATIONS INCLUDE:

- Excavation for MSE Walls & construction of other structures
- Deep foundation – Progressive shoring while excavating
- Temporary shoring above or below traffic lanes
- Temporary shoring around existing structures
